

Thank you for your continued participation throughout the planning phase of our project. I have compiled a short list of questions that will allow for a clearer understanding of where each of us are at in our expectations for this project. Rest assured that your time commitment and input is extremely valued, and will not be in vain. As we progress through this phase, the information we collect will be used to create more specific documents that will eventually allow us to create programming tasks.

1. What kind of website are you wanting to build?
 - Community site for Free Code Camp Students in Tucson and surrounding areas
 - Educational site for Free Code Camp Students in Tucson and surrounding areas
 - Project Collaboration
 - Meetup Group Management
2. What features do you want to specifically contribute to?
 - No preference so long as we gather enough information about each feature to write programming tasks.
3. What features don't you like?
 - Job Search - I believe its unnecessary since there's a plethora of available job posting sites available.
 - Forums - Again, its redundancy would add unnecessary scope to our project since there's plenty of forums available for students in our field. However, I do like the tutorials/how-to feature suggestions.
4. What features would you add to the current feature list?
 - I think we have a good amount of features to begin making a version release plan.
5. What or the basic, crucial needs required for day to day usage?
 - Membership and account management features
 - Basic communication features (messaging, notifications, contacts)
6. Do you have any changes to suggest to any of the features?
 - At this point no, but I would like clarification about some of the features such as the rss feed and dashboard.
7. Do you have any changes to suggest to the process we are using?
 - No
8. Do you know about the Software Development Life Cycle (SDLC)?
 - Yes
9. Do you know about Agile methodology?
 - Yes
10. Please describe your software development experience.
 - Self taught developer. I have planned and managed several personal projects, worked for a couple professional clients. I have studied and implemented game development, web development, and

windows development

11. Please list your skills

- HTML
- CSS
- JS
- Visual Basic
- ASP.NET
- Project Planning
- Project Management

12. How many hours per week can you realistically commit to our project?

- I can contribute 5 – 10 hours a week with my current schedule. I will be more than willing to schedule more time based on the needs and commitment level of the team as a whole.

13. What concerns do you have about our project?

- Open and steady communication between team members
- Lack of proper project planning and management

14. Do you have a preferred task management system?

- Yes, Asana, but I am willing to use anything else that supports collaborative work.

15. Is there anything else that you would like everybody to know?

- No

16. Do you have any questions?

- No
