

Thank you for your continued participation throughout the planning phase of our project. I have compiled a short list of questions that will allow for a clearer understanding of where each of us are at in our expectations for this project. Rest assured that your time commitment and input is extremely valued, and will not be in vain. As we progress through this phase, the information we collect will be used to create more specific documents that will eventually allow us to create programming tasks.

1. What kind of website are you wanting to build?

I think the website should facilitate any FreeCodeCamp activities. Events, forums, and most importantly a job board.

2. What features do you want to specifically contribute to?

I want to get my hands on as many different areas I can.

3. What features don't you like?

I think it may be hard to get people to create a video tutorial series as it takes a lot of time to record, etc.

4. What features would you add to the current feature list?

Not quite a feature but I think there could be an 'About' page. We could give a little background on both FCC and FCC Tucson specifically.

5. What or the basic, crucial needs required for day to day usage?

The site needs to have a well functioning forum because that is a highly used tool on the original FCC site.

6. Do you have any changes to suggest to any of the features?

I think anywhere users can provide their own input, there should be a flag option.

That way admins can easily identify users not complying with the rules and deal with them accordingly.

7. Do you have any changes to suggest to the process we are using?

I like the process so far, but I think this question could be tackled better once we actually start developing and we encounter issues.

8. Do you know about the Software Development Life Cycle (SDLC)?

Yes, mostly only definitional-type knowledge I gained through school though.

9. Do you know about Agile methodology?

Again, a definitional understanding. Not a lot of professional experience using this.

10. Please describe your software development experience.

I have experience with SQL and creating/querying databases from my schooling. I started FCC in May and I'm learning as much as I can.

11. Please list your skills

SQL, HTML, CSS, jQuery, Bootstrap, and some JavaScript. I'm working through FCC pretty quickly though so I'll hopefully know more algorithm scripting by the time this gets going.

12. How many hours per week can you realistically commit to our project?

Through July 2017: Around 6 hours, potentially more depending on scheduling.

Aug 2017 - End date: Around 3 hours, potentially more depending on scheduling. (I go back to school and work more)

13. What concerns do you have about our project?

No concerns.

14. Do you have a preferred task management system?

Haven't used them yet, so no.

15. Is there anything else that you would like everybody to know?

I am familiar with the SQL language and MySQL so I might be able to help everyone with some general questions.

16. Do you have any questions?

How long are we thinking the project will take from start to finish?
